PROFESSIONAL SUMMARY

Second-year B.Tech CSE (AI for IoT) student at Sharda University with strong foundations in AI/ML, Deep Learning, IoT, and data-driven problem solving. Experienced in building end-to-end projects involving machine learning, computer vision, and full-stack development, with recognition in business and national-level hackathon competitions.

EDUCATION

B.Tech – Computer Science Engineering (AI for IoT) *Sharda University* | CGPA: 8.7 | 2024 – 2028

SKILLS

Languages: C++, Java, Python, JavaScript, TypeScript, SQL, HTML, CSS

Frameworks & Libraries: React, Flutter, Node.js, Express.js, Flask, TensorFlow

Tools & Concepts: Git, GitHub, REST APIs, DBMS, Computer Vision, Data Structures & Algorithms

Technical Skills: AI & ML, Deep Learning, Internet of Things (IoT), CAD Modelling, Data-driven Problem Solving

Soft Skills: Leadership, Critical Thinking, Problem Solving, Analytical Thinking

EXPERIENCE

Machine Learning Intern | *Skillfied Mentor* | Virtual | J 2026 – Present

- Developing and evaluating supervised and unsupervised ML models for real-world datasets using Python, Scikit-learn, and TensorFlow.
- Performing data preprocessing, feature engineering, and model optimization to improve prediction accuracy and performance metrics.

PROJECTS

Autonomous Onboard Collision Risk Detection for CubeSats | *Python, OpenCV, Machine Learning, Edge AI* | [GitHub](#) | Jan – Mar 2026

- Built a vision-based detection and collision risk prediction pipeline for real-time onboard space debris detection on CubeSats.
- Implemented a real-time simulation for demonstration; selected as a Finalist among 900+ teams at the Elite Hack national competition.

Kin Well – AI-Based Preventive Healthcare App | *Python, TensorFlow, Flask, Machine Learning* | [GitHub](#) | Sep 2025

- Trained an ML model for skin image analysis and integrated predictions via Flask APIs with offline usability and multilingual support.
- Designed for rural communities with vaccine reminders, early health guidance, and AI-based preventive care features.

Fresh Mate – Smart Food Freshness Detection System | *HTML, CSS, JavaScript, Flask* | [GitHub](#) | Jul – Sep 2025

- Developed a responsive frontend dashboard to visualize real-time food freshness data (temperature, humidity, gas levels).
- Integrated APIs to display live freshness scores and spoilage alerts with interactive charts, color-coded indicators, and status cards.

CERTIFICATIONS

CS50: Introduction to Computer Science – *Harvard University*

Jul 2025

Full-stack fundamentals covering C, Python, SQL, HTML, CSS, and JavaScript. (Certified)

Oracle Java Course – *Oracle Academy*

Nov 2025

Core Java concepts: OOP, exception handling, and basic application development.

ACHIEVEMENTS

- First Runner-Up, Brizzpreneur Business Event (Sep–Oct 2025) – Recognised for strong problem identification, feasibility analysis, and pitch execution.
- Finalist, Elite Hack Competition (National) – Selected among 900+ teams for a CubeSat project on AI-based satellite collision prediction and space debris monitoring.
